THE CHALLENGES WE ADDRESS

The threat outlives the conflict. The skills must stay.

■ AIRCRAFT BOMB EXAMINED DURING AN ASSESSMENT MISSION

Mines, unexploded ordnance, improvised devices and unsafe ammunition depots threaten communities long after the fighting stops. National authorities, international organisations and N'GOs need trained teams, sound procedures and independent quality control. We bring the expertise, the training and the technical assistance to build them, to international standards.

YOUR CHALLENGE

OUR ANSWER

01 A national capacity to build

Deminers, EOD and IEDD operators must be trained to recognised standards.

→ **Bespoke courses delivered on site**, in English or French: EOD and IEDD from Level 1 to 3+, underwater EOD and CBRN, with training of trainers for a lasting national capacity.

02 Ammunition stockpiles at risk

An unplanned explosion at a munitions site endangers whole communities.

→ **Stockpile safety to IATG**: depot assessments, risk reduction, stockpile management procedures, identification and destruction of surplus and obsolete ammunition.

03 A programme to monitor

Donors and authorities must know that operations are safe, effective and compliant.

→ **Independent monitoring, evaluation and quality audits** of clearance operations, with findings and recommendations your teams can act on.

04 National standards to write

Without standards and SOPs, accreditation and quality control cannot work.

→ **Drafting support for national standards**, SOPs and training curricula, aligned with IMAS, IATG and the country's own regulations.

05 A new country, a new threat

Opening a programme in an unfamiliar context calls for reliable information.

→ **Exploratory missions and needs assessments**, by experts used to multicultural and high-risk environments, to design a project that fits the ground.

CONSULTANCY, TRAINING AND TECHNICAL ASSISTANCE

From the first assessment to lasting national capacity.

We support international and regional organisations, governments, armed and security forces, NGOs and private operators in countries affected by explosive ordnance, to IMAS, IATG and NATO standards.

01 EOD and IEDD training

Explosive ordnance and improvised explosive device disposal, Level 1 to 3+, compliant with IMAS and NATO standards.

03 Counter-IED and CBRN

Search in open and urban areas, reconnaissance in contaminated environments, CBRN threat disposal, explosives attack scene investigation.

05 Survey and land release

Non-technical and technical survey, land release, manual and mechanical clearance, to IMAS 08.10, 08.20 and 09.10.

07 Standards and procedures

National mine action standards, SOPs and training curricula, drafted or reviewed together with your teams.

02 Underwater EOD

Underwater explosive ordnance reconnaissance and clearance (UW-EOR, UW-EOC) for diving units, with on-site mentoring.

04 Weapons and ammunition management

Physical security and stockpile management (PSSM), weapons marking, SALW control and destruction of obsolete ammunition.

06 Quality management and audits

Monitoring and evaluation missions, quality audits of operations, investigations after explosive incidents.

08 Equipment and field operations

Selection, supply and training on detectors, robots and boats; field operations with the DEMINETEC Group teams.

HOW WE BUILD A COURSE

PROJECT REFERENCE

An underwater EOD capability for a national river police

From 2018 to 2022, our experts helped the interior ministry of a Middle Eastern country build its underwater explosive ordnance capability: courses for its diving units, mentoring on site, then fast boats with pilot and mechanic training.

- Reconnaissance and clearance courses for EOD diving units
- Mentoring periods on site, alongside the courses
- Fast boats delivered, pilots and nautical mechanics trained

36

river police divers trained in underwater reconnaissance

9

successive projects, from 2018 to 2022

3 months

of on-site mentoring after the first course

OUR COMMITMENTS

Why choose **GEODE**

01

Field-proven experts

EOD, IEDD, underwater EOD and PSSM specialists, used to multicultural teams and to difficult, high-risk environments.

02

International standards

Every course and every procedure is built on IMAS, IATG, MOSAIC and NATO standards, and on the country's national standards.

03

Capacity that stays

Training of trainers, mentoring and documentation handed over: national teams keep the skills long after we leave.

04

40+ projects since 2015

For international organisations, governments and NGOs, in more than 20 countries on four continents.

05

The strength of a group

As a DEMINETEC Group company, we mobilise the group's survey and clearance teams, underwater capabilities and equipment for field projects.

06

Bespoke, in English or French

Each course is designed around the trainees' real threat environment and delivered on site, in English or French.
